You and I are going to play a text-based version of Pac-Man.
You will ask me for Pac-Man's next move (up, down, left, or right)
at each step, and I will respond with the direction I want to move.

Pac-Man will aim to eat all of the dots on the grid while avoiding
the ghost. Eating a Power Pellet makes the ghost temporarily
vulnerable — during that time, Pac-Man can eat the ghost for bonus
points. If the ghost catches Pac-Man, he loses a life. The game
ends when all dots are eaten (player wins) or Pac-Man loses all
3 lives (player loses).

Grid layout:
- 5x5 grid using these symbols:
  P = Pac-Man
  G = Ghost (dangerous)
  g = Ghost (vulnerable, after Power Pellet is eaten)
  . = Regular dot (10 points)
  o = Power Pellet (50 points; makes ghost vulnerable for 5 turns)
  # = Wall (impassable)
  ' ' = Empty space (already eaten)
- Pac-Man starts at position (row 4, col 0) — bottom-left
- Ghost starts at position (row 0, col 4) — top-right
- Place one Power Pellet at (row 0, col 0) and one at (row 4, col 4)
- Fill remaining open cells with regular dots
- Add a few wall (#) tiles to create simple corridors

Game Rules:

1. Each turn, Pac-Man moves one cell in the chosen direction
2. Pac-Man cannot move through walls or outside the grid
3. Eating a dot removes it and adds 10 points to the score
4. Eating a Power Pellet adds 50 points and makes the ghost
   vulnerable for 5 turns (shown as lowercase g)
5. While the ghost is vulnerable, if Pac-Man moves onto it, Pac-Man
   eats it for 200 points and the ghost respawns at its start position
6. While the ghost is not vulnerable, if the ghost moves onto Pac-Man
   (or Pac-Man moves onto the ghost), Pac-Man loses a life and
   resets to his start position
7. The ghost moves one step closer to Pac-Man each turn (direct chase)
8. The game is won when all dots and Power Pellets are eaten
9. The game is lost if all 3 lives are used up

Your Tasks:
1. Print the 5x5 grid at the start and after every move
2. Show the current score, lives remaining, and whether the Power
   Pellet effect is active (and how many turns remain)
3. Ask me: "Which direction should Pac-Man move? (up/down/left/right)"

ChatGPT

   life lost, etc.)
5. Announce when the game is won or lost

Begin by printing the initial grid and asking for my first move.

Let’s begin! 🎮

Initial Grid (5×5)

```
o . . . G
. # . # .
. # . # .
. . . . .
P . . . o
```

- **P** = Pac-Man (start at bottom-left)
- **G** = Ghost (top-right)
- **o** = Power Pellets (top-left & bottom-right)
- **.** = Dots
- **#** = Walls

Game Status

- **Score:** 0
- **Lives:** 3
- **Power Pellet:** Not active

Your Move

Which direction should Pac-Man move?

```

Game Over 💀

- **Final Score:** 320
- **Lives Remaining:** 0

The ghost caught you at the top row — tough chase at the end there. You were close to looping back for that last Power Pellet, but the ghost boxed you in.

If you want, we can run it again with:

- smarter ghost behavior
- bigger grid
- or even multiple ghosts 😈

Please capture each move and board image in a markdown file I can copy/paste into a Jupyter notebook

Here's a clean **Markdown log of your entire Pac-Man game** that you can copy/paste directly into a Jupyter notebook.

Markdown

If you want, I can also:

- Turn this into a **rich notebook with animations (matplotlib / ASCII playback)**
- Or generate a **replay script in Python** so you can step through moves interactively
